

Abdominal sonography course: Advanced Liver Pathologies

Termin

FRIDAY, 21.04.2017

Veranstaltungsort

RAI Amsterdam
Europaplein
1078 GZ Amsterdam
The Netherlands

Kurszeiten

18:30 - 20:00

**Description**

The sonography course for the advanced is intended for physicians with moderate or high experience. Those with moderate experience can try to enhance their skills by studying more difficult cases demonstrated on a sonography-simulator which acts like a real sonography machine. The focus will be on pathology, from hepatic adenoma to hepatocellular carcinoma, cirrhosis with ascites, and typical signs of portal hypertension, hepatic steatosis etc. For those who are highly experienced, different 'rare cases' will be shown, such as Budd Chiari syndrome, several primary liver tumours, infectious diseases, Rendu-Osler disease, and more. In a relatively short time, (90 minutes) a collection of cases will be studied which in real life would take many years to encounter; but once seen, will never be forgotten!

Learning objectives:

- to enhance sonography skills by studying more difficult and rare cases
- to learn about a lot of rare diseases in a short time
- to identify, among others, Budd Chiari syndrome, Rendu Osler disease, hepatocellular carcinoma, hepatic adenoma, follicular nodular hyperplasia, multiple endocrine neoplasia, polycystic liver disease, and echinococcus.
